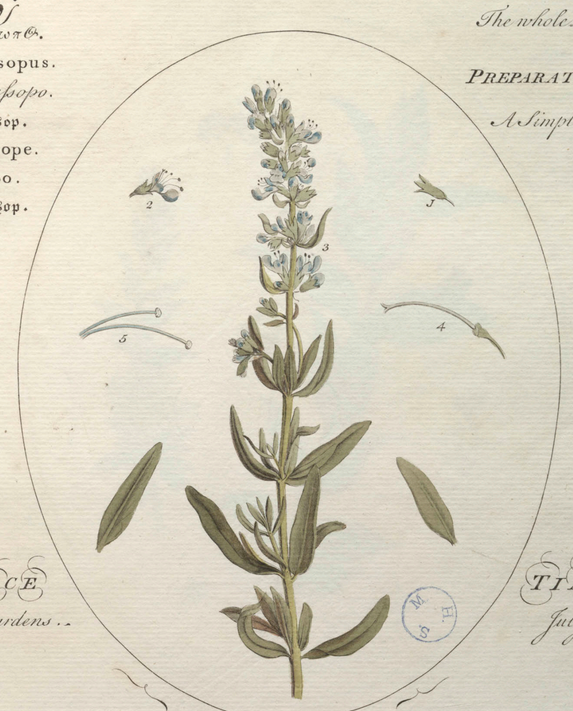
A Simple Water.



PLACE

In Gardens.

TIME

July.

DESCRIPTION.

This Plant riſes to about a foot high from a thick woody Root, having Square Stalks of a Light green, ſending out Shoots croſsways, as the Leaves grow by pairs, of a green, a little inclin'd to a brownish burn, with Edges turnid Backwards. The Cup 1, is a taperd ſocket cut into five gashes with very fine tender points. The Flowers 2, are Tubas ſpread and Divided at the end, of a most Beautiful Blue, hairy on the upper part of the Inside. These Flowers which grow regularly at the Joints of the Stalks 3, turn to one ſide to Blow. The Style 4, which divides at the End, is of the ſame Colour, And Riſes from the Center of four ſeeds. The Flower has two long and two ſhort deep Blue Chives, with Black Summits coverd with a white Farina. 4 and 5 are magnified.

VIRTUES.

It is reckon'd Cephalic, is uſed against Diſtempers of the Lungs, and if Bruiſd & outwardly applied for taking Black & Blue marks out of the Skin.
